FITTING ADVICE

The brackets are supplied with number 6 screws. You must drill a pilot hole before fixing the brackets to the stairs. For softwood create a 2.5mm pilot hole and for hardwood create a 3mm hole.

Position one bracket then secure it to the tread (flat part of step) and riser (vertical part of step). Cut the rod to size, if required, and place securely in first bracket. Now fit the second bracket to the other end of the rod.
